Concepts of Modern Catalysis and Kinetics I. Chorkendorff, J. W. Niemantsverdriet

Until now, the literature has offered a rather limited approach to the use of fundamental kinetics and their application to catalytic reactions. Subsequently, this book spans the full range from fundamentals of kinetics and heterogeneous catalysis via modern experimental and theoretical results of model studies to their equivalent large-scale industrial production processes. This second edition includes significant new developments, with all the chapters updated by way of recent examples and relevant new literature. With its focus on practical application, rather than theory, the result is key knowledge for students at technical universities and professionals already working in industry.

From Reviews of the First Edition:

'I am impressed by the coverage of the book and it is a valuable addition to the catalysis literature and I highly recommend purchase'

(Energy Sources)

'...this excellent book is highly recommended to students at technical universities, but also entrants in chemical industry. Furthermore, this informative handbook is also a must for all professionals in the community.'

(AFS)

'Overall, this is a valuable book that I will use in teaching undergraduates and postgraduates.'

(Angewandte Chemie - I. E.)
