As both software capability and engineering understanding have advanced, the application of modelling techniques to the design and development of motor vehicles has increased. The use of these techniques now forms a tool on the analysis of noise vehicle harshness (NVH) for both vehicle manufacturers and component suppliers. This text aims to make automotive engineers and managers aware of the current capabilities of the current methods which are now available in the field of modelling and NVH. Topics covered include: vehicle refinement; driveline shudder; acoustic and vibroacoustic modelling; and modelling absorbent materials.
