How to be a Quantitative Ecologist: The 'A to R' of Green Mathematics and Statistics Jason Matthiopoulos

Ecological research is becoming increasingly quantitative, yet students often opt out of courses in mathematics and statistics, unwittingly limiting their ability to carry out research in the future. This textbook provides a practical introduction to quantitative ecology for students and practitioners who have realised that they need this opportunity.

The text is addressed to readers who haven't used mathematics since school, who were perhaps more confused than enlightened by their undergraduate lectures in statistics and who have never used a computer for much more than word processing and data entry. From this starting point, it slowly but surely instils an understanding of mathematics, statistics and programming, sufficient for initiating research in ecology. The book's practical value is enhanced by extensive use of biological examples and the computer language R for graphics, programming and data analysis.

Key Features:

- Provides a complete introduction to mathematics statistics and computing for ecologists.
- Presents a wealth of ecological examples demonstrating the applied relevance of abstract mathematical concepts, showing how a little technique can go a long way in answering interesting ecological questions.
- Covers elementary topics, including the rules of algebra, logarithms, geometry, calculus, descriptive statistics, probability, hypothesis testing and linear regression.
- Explores more advanced topics including fractals, non-linear dynamical systems, likelihood and Bayesian estimation, generalised linear, mixed and additive models, and multivariate statistics.
- R boxes provide step-by-step recipes for implementing the graphical and numerical techniques outlined in each section.

How to be a Quantitative Ecologist provides a comprehensive introduction to mathematics, statistics and computing and is the ideal textbook for late undergraduate and postgraduate courses in environmental biology.

"With a book like this, there is no excuse for people to be afraid of maths, and to be ignorant of what it can do."

—**Professor Tim Benton**, Faculty of Biological Sciences, University of Leeds, UK

From reader reviews:

Emily Carey:

Book is to be different per grade. Book for children right up until adult are different content. As we know that book is very important for all of us. The book How to be a Quantitative Ecologist: The 'A to R' of Green Mathematics and Statistics has been making you to know about other know-how and of course you can take more information. It doesn't matter what advantages for you. The guide How to be a Quantitative Ecologist: The 'A to R' of Green Mathematics and Statistics is not only giving you a lot more new information but also to get your friend when you experience bored. You can spend your spend time to read your publication. Try to make relationship while using book How to be a Quantitative Ecologist: The 'A to R' of Green Mathematics and Statistics. You never sense lose out for everything if you read some books.

Richard Stratton:

Reading can called brain hangout, why? Because if you find yourself reading a book specially book entitled How to be a Quantitative Ecologist: The 'A to R' of Green Mathematics and Statistics your mind will drift away trough every dimension, wandering in most aspect that maybe unidentified for but surely might be your mind friends. Imaging each and every word written in a publication then become one form conclusion and explanation this maybe you never get just before. The How to be a Quantitative Ecologist: The 'A to R' of Green Mathematics and Statistics giving you a different experience more than blown away your brain but also giving you useful information for your better life in this era. So now let us demonstrate the relaxing pattern the following is your body and mind will be pleased when you are finished reading it, like winning a sport. Do you want to try this extraordinary spending spare time activity?

Robert Wilkerson:

Reading a book to be new life style in this calendar year; every people loves to study a book. When you examine a book you can get a great deal of benefit. When you read publications, you can improve your knowledge, because book has a lot of information onto it. The information that you will get depend on what types of book that you have read. If you would like get information about your research, you can read education books, but if you want to entertain yourself look for a fiction books, this sort of us novel, comics, in addition to soon. The How to be a Quantitative Ecologist: The 'A to R' of Green Mathematics and Statistics will give you a new experience in reading through a book.

Cheryl Waller:

Reserve is one of source of information. We can add our information from it. Not only for students but in addition native or citizen need book to know the update information of year in order to year. As we know those books have many advantages. Beside we add our knowledge, could also bring us to around the world. From the book How to be a Quantitative Ecologist: The 'A to R' of Green Mathematics and Statistics we can consider more advantage. Don't that you be creative people? For being creative person must like to read a

book. Only choose the best book that acceptable with your aim. Don't always be doubt to change your life at this book How to be a Quantitative Ecologist: The 'A to R' of Green Mathematics and Statistics. You can more attractive than now.
